

# BLACK GOLD

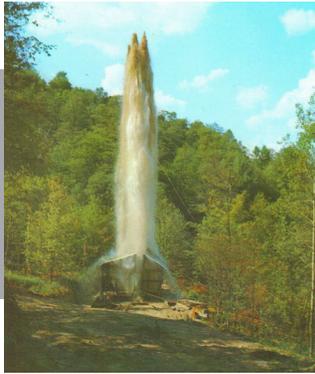

A century ago, petroleum - what we call oil - was just an obscure commodity; today it is almost as vital to human existence as water. Oil transports us, powers our machines, warms us and lights us. It clothes us, wraps our food and encases our computers. It gives us medicines, cosmetics, CDs and car tires. Even those things that are not made *from* oil are often made *with* oil, with the energy it gives. Life without oil, in fact, would be so different that it is frightening to contemplate.
